

# Too many skins (aka boredom + GIMP)

## **NEWEST! PLEASE READ!**

Laffinty!3.0- this one has an updated mania mode, courtesy of some old arrow files I found in the extras folder of an old skin someone suggested to me. It also has a few extra sounds in there. There are also updated spinner elements. The only problem is that my osu client displayed the spinner metre weirdly. I had to do some wizardry, so if you don't have a 1440 by 900 monitor, you'll probably have some issues. Therefore, i have created 2 versions.

If you don't have a 1440x900 monitor, click [here](#)

If you do, click [here](#)

Laffinty!- this one uses hitcircles from HulbeH's minimal weeb Noel 1.3 skin. It also utilises a lot of elements from osuskinner.com. There are probably other stolen elements that I'm not mentioning, but yeah, this was about a year in the making.

V1-this is the original. I pretty much just took elements from other people's skins (like zeluaR) and combined them. I regret making this one with a passion.

---

V2- I liked wubwoofwolf's hit circles because they didn't have an animation play when you hit them. I didn't like the font, and didn't have the tools or editing knowledge to do it myself, so I asked my osu friends for help and RapidPower volunteered to change the font. I also took the note and mania .ini files from superhighlive's stepmania skin and put them in this skin. Otherwise, just some minor tweaks.

---

V3- This one has most of the stuff from V2, except for a few images and the mania section from -yuo-'s VOEZ skin.

V3\_sameskin\_noVOEZstylemania

This one is a little less elegant, but the VOEZ mania skin on V3 was a little too distracting, so I used the arrow and arrow note files from aesthetic (staiain edit). This one also has hitcircles (as always, the hitcircles and default numbers are the same file) from talalusha's bowdown skin. I did some editing and the result was the same file but with non-colored rims that are **very** thin.;
